### **In General**

Optimal packing is crucial for success or failure. Markings such as “Fragile” or “Handle with Care” is not self sufficient, but it is a good supplement.

Goods should be packed taking into account:

- 1.Type of goods
  - a.high value goods
  - b.goods in sales packing
  - c.goods unpacked for instance furniture
  - d.fragile goods for instance glass windows
- 2.Way of shipment (air, sea, courier and / or road)
- 3.Legislation (foods, hazardous goods etc.)

Goods in boxes

Typically boxes weighing less than 20 kgs can be handled without machines. Boxes weighing more than 20 kgs should enable handling by machines like a pump truck or fork lift.

- 1.Use stabile boxes with high stack strength
- 2.Use shock absorbing material to avoid air filled pockets and to protect the goods
- 3.Use strong tape to seal the boxes and keep them sealed during transport

In case of doubt please contact Fastlane ApS for our recommendations.

Please be informed Fastlane ApS do not accept responsibility for the recommendations we give as to packing. Our recommendations are base on the accumulated know-how we have generated and should purely read as an attempt to assist you. At the end of the day it will always be the responsibility of shipper to secure sufficient packing.
